OiShi-e! is an AR creature companion that lives inside your everyday life. Point your phone camera (or webcam) at a real object — a mug, a plant, a storefront — and Meta's Muse Spark looks at it and hatches a "Muse" creature with its own element, stats, personality and voice.

The creature then walks with you in AR, reacts to where you are, keeps a daily diary, dances, and battles wild creatures that appear from the objects you scan. You can talk to it: voice commands ("attack", "buff") control battles, and questions like "where can I recharge tokens nearby?" are answered by the creature itself through Muse. It is designed for Ray-Ban Meta glasses as a hands-free companion: the glasses' mic and speakers carry the conversation while the phone runs the AR view.

The problem: lifestyle apps feel like chores and most AR games end when you close

the app. OiShi-e! turns ordinary moments into play through a character you actually care about, with in-game tokens that reward everyday actions.

Shipped as: web (source), Android APK, Ray-Ban Meta compatible mode (glasses mic/speaker), and a Windows .exe.
